SOME WORK OF THE SOUND OF LIGHT IN THE ENTERTAINMENT INDUSTRY

FULL TURN KEY HOME CINEMAS

Houghton Jhb

Varied light sources allows you to set the perfect ambiance. Complete darkness for the feature film, dimmed cove lights for family viewing, and a little brighter for watching the game with your mates.

With just one level change, 3 different seating opportunities in four rows are possible. Beanbags for the young ones, recliners for the ladies, and high stools for the guys.

Acoustic panels with replaceable printed fabric faces makes changing the theme of the room easy. Backlighting provides real cinematic drama.

Suspended bulkheads opens possibilities for lighting options even when access from above is difficult

Dolby Atmos 7.2.2 sound makes the movie experience completely immersive.

Virtually any fabric can be used in SOAK™ acoustic panels

Textured cladding provides visual interest, a bit of acoustic diffusion and the perfect cavity to hide all those cables in a room where there are no conduits.

Fabric with superior stain-resistant treatment provides a cool and comfortable alternative to leather.

Special Designed Shopfitting for Cinema

**Diffusion panels
become beautiful
sculptural elements.**

**Versatile seating can
transform your cinema
into a comfortable
lounge.**

A small investment in a photo-real renderings will give you peace of mind when committing to the project.

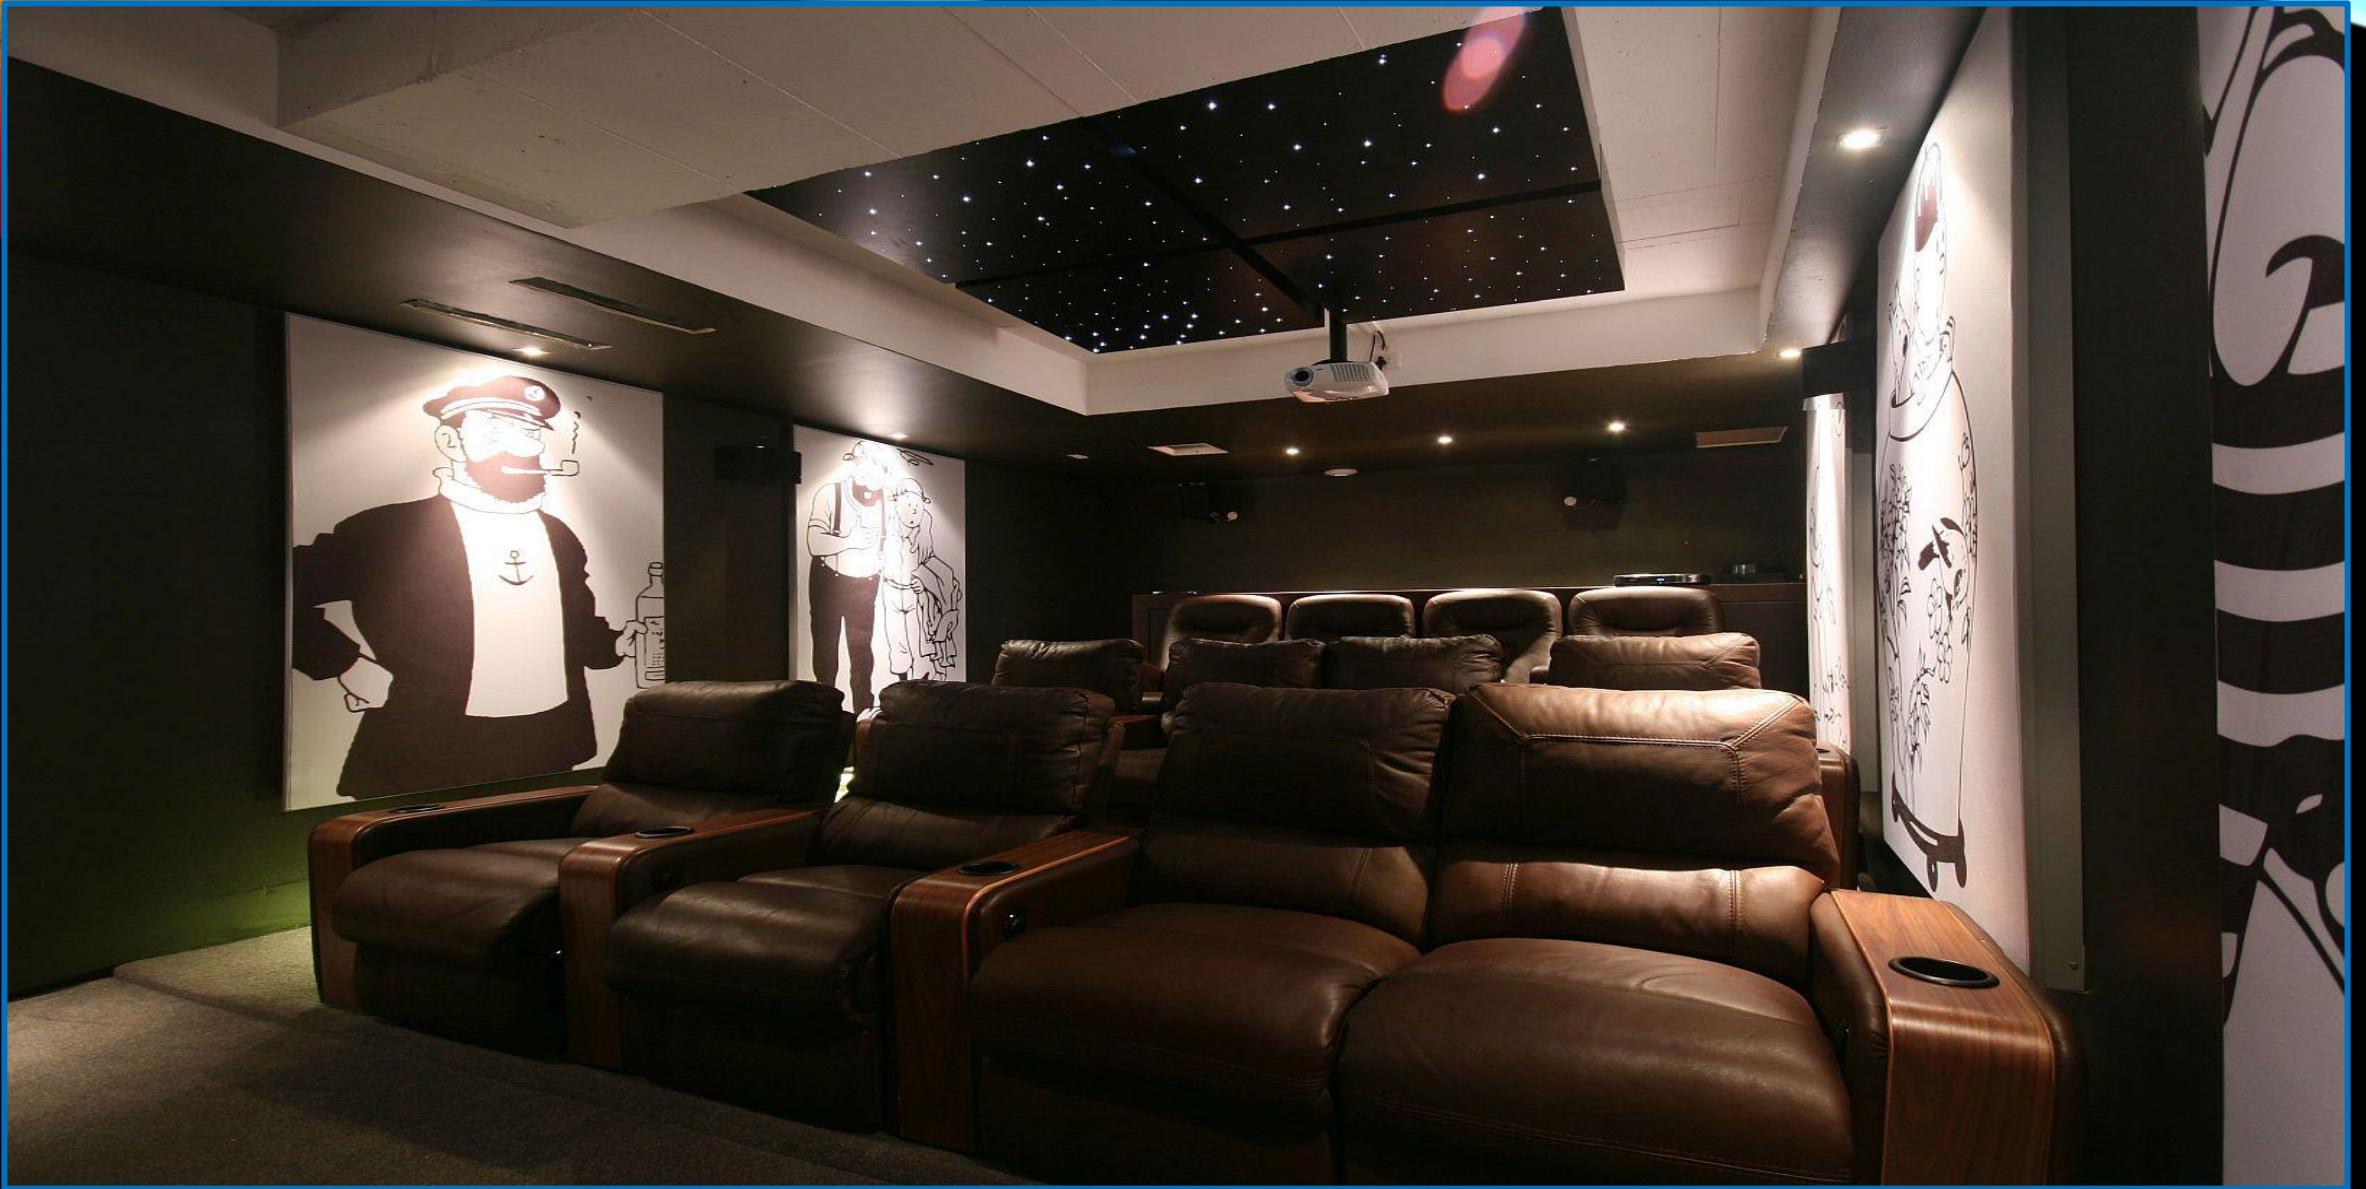

To allow for a starlight installation, suspended bulkheads were hung under the small, inaccessible ceiling void. This also reduced the sheer scale and volume of the room.

For aesthetics, many acoustic panels were fitted: not all of them are absorptive though. Each room needs to be evaluated, and treated accordingly.

We were commissioned on this project after the steps were constructed. To allow for the seating arrangement with the counter and recliners, we altered the steps using a clean timber construction method.

Vredehoek – Cape Town

Bold colours and a lively atmosphere contrasts against a home that is otherwise serene and understated. A home theatre is an opportunity to create an escape from the rat-race.

Raised podiums were calculated and constructed to provide clear sightlines from each seat. A timber construction was used to facilitate re-purposing the room at a later stage.

Maximum screen size and the height of the of the back row podium was dictated by the limited ceiling height and structural beams. Accurate site surveys, meticulous sight-line planning and hands-on involvement has made this a beautifully functional cinema.

With heavy columns and concrete walls supporting the multi-storey building above, careful planning was required to fit a theatre, wine cellar, kitchenette, dining space and restroom in this basement.

The sculptural ceiling treatment is not only an aesthetic highlight, but also great for diffusing sound of what would have been a large reflective surface.

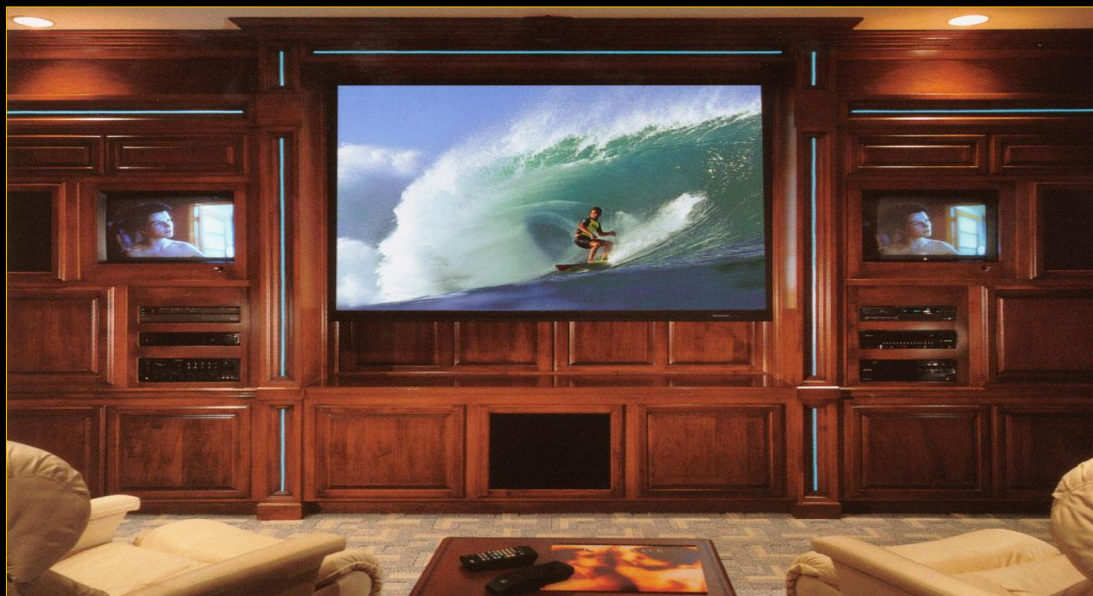

A proscinium wall with an acoustically transparent screen conceals front stage speakers.

Acoustic panels mounted on existing walls
